

identify the use case, primary actor and secondary actor

There are unpredictable things happens in life. So the feature 'Manage life disability and AD&D' will allow user to do financial planning for disabilities and critical illness or any other unexpected challenges. It also helps user to plan as per their specific need for such situations. Any user who wants to understand how company monitors the prescriptions of narcotic and controlled drugs through the administration of prescription monitoring system, can use this feature. Not only this but, 'Find Drug Program Management' will enable user to view how company administers federal and provincial government drug programs.

Coming to the claims part, there should be a function which allow users to 'Submit their Claims'. Be it online or offline. The website should assist user to fill up the forms and submit the claim documents if they want to submit online and also empower them with different options if they want to do it offline. Like the information regarding how they can submit documents, through smart phones or in person or through fax. Another functionality should be there which allows user to 'Review the Claim Documents'. After reviewing the documents the 'Claims Processing' is required. Here user can approve, deny or ask more details about claims. So the functionality should enable user to do all of these.

'Confirm Claim Closure' will be the feature which enables user to close the claim or to raise a dispute. It means the user can close the claim if they are satisfied or can do further processing if there is a disagreement.

There should be other features which would help user to get connected with the company and also entitle them to use company' resources as a customer. There should be a feature 'Access Resources' provided by the company. Like health groups, news and bulletins etc. 'Find a Network' would be one feature where user can join a particular type of group. That means user can build up connections with the other members of groups of their choices, created by company.

Another very important feature is 'Stay in touch'. Through this functionality company wants user to stay in touch with company through different means, like; Facebook, you tube, Twitter, etc. Here, when user will follow the company on social media it would be beneficial for both, the customer and the company. If any user wants to Receive alerts about, what's happening in the company regarding
