		Ask Forms-s	•
		Submit Form-p	•
		Review Company-p	- History of company - Other business - Other services - Company achievements - Contribution to the society
		Review Insurance process	- Describe Insurance - Display Framework

When user wants to purchase a plan the system should allow user to select the plan which he/she wants to purchase and also allow them to purchase the plan. System should also ask the basic questions before it enables the user to purchase that plan. Like; number of individuals, effective date of plan, applicants (dependents/ spouse), DOB, sex, use of tobacco? etc.

If user have already purchased a plan and he/she wants to add life events, such as adding or removing spouse or dependents, the system should enable the user to do the same. This functionality will help user to make changes in his/her plan easily.

‘Review Claims’ is the functionality which allows user to review the claims. If any user wants to see the his/her claim related activity/information, review claim feature will enable them to see ‘My claims’, ‘Service Date’, ‘Member’, ‘Status’, Billed’, ‘You may owe’ etc. Another important feature would be ‘View Benefits’. In here user can see the benefits of being a member or certain policy holder. Here user can also be a Health Care Provider.

There are users who want to find a service provider on the website. Any user who wants to do so, can use this feature ‘find a service provider’. The system should be able to display the results which includes, the name, area of expertise, contact number and the geographical area, where user want the service.

Users for insurance website are not only policy holder or general user but they can also be Health care professionals. So there must be a feature which should help users to register themselves as HCPs and become the part of Apex family. The system should display a form and ask for provider’s information, which includes; professional information, documents, direct deposit setups and additional information (required by company or law). The Users who have registered themselves as HCPs can see the list of benefits as an HCP on Apex website under the feature as ‘Receive Benefits as HCP’. For example; are there any benefits for their clients etc? If users want to receive audit service from the company, which also includes; onsite audit reviews, client verification letters and special investigators, they can use the feature ‘Receive Audit Services’

If any user wants to search forms and documents ‘The search forms and Documents’ functionality should enable user to do the same. Here system should ask the type of forms user want to see and should display all the available options. Another feature of ‘Submit forms and documents’ will permit user to submit the forms and documents they want to.

When user wants to know more about company details like, history of company, other business of company, other services provided by the company they should be able to use ‘learn more about company’ options. This will describe the details of the company achievements, their contribution to the society etc. If the user wants to learn more about how insurance process works they should be able to use the feature ‘Learn more about

insurance'. The system should give a walkthrough to the user and describe the insurance process in step wise manner. System should display the entire framework for insurance process.
